DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims #1-20, drawn to a method for forming a conductive template, classified in class 438, subclass 637.
- II. Claims #21-29, drawn to a template device, classified in class 257, subclass 295.
- III. Claims #30-39, drawn to a method for creating a pattern on a body, classified in class 438, subclass 758.

Inventions Group I, II and III are related as product made and process of making. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product claimed in Group II can be made by a different method than that claimed in Group I. For example, the method of forming a conductive material, as claimed in Group I, can be used to create a different device than that claimed in Group II, which have conductive regions that are substantially transparent to a predetermined wavelength. Also, the method of Group I is a different method than that claimed in Group III. For example, the method of Group I creates a template on a body, which is not limited to substrate; however, the method of Group I generates a template on a substrate. Furthermore, Group II forms a template that consist of a

substrate that has conductive regions that are substantially transparent to predetermined wavelengths, while the templates generate in Group III have no such conductive layers.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I, II and III are different and therefore restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
